

FRANCIS WEB AGENCY · WEBSITE COPY DECK

Every word on the site, ready to ship.

Version 2.1 — the rebrand copy in the calibrated Highlighter system.

Nineteen sections: five services, both cities, and every page in between, written in the locked voice under a verifiable-claims-only policy. Pages consume this deck verbatim.

Citrine-marked items are the open decisions — prices and details only Kasan can fill.

V2.1 · 2026 · 19 SECTIONS · 5 SERVICES · CLAIMS POLICY: VERIFIABLE ONLY

SOURCE: WEBSITE/DOCS/FWA-WEBSITE-COPY.MD · COMPANIONS: BRAND GUIDE V2.1 · DESIGN SYSTEM V2.1

Version 2 — the rebrand copy (2026-07). Supersedes v1. Written in the locked brand voice (`brand/voice-guide.md`): plain-spoken, honest, empathy-first, specific. Pages consume this copy **verbatim** — don't invent, don't pad.

Rules this doc obeys: - **Claims policy: verifiable promises only.** Real prices, real timelines, the 24-hour reply, 50/50 terms, custom-not-templates, one person start to finish. No performance numbers, no outcome numbers, no client counts — nothing until real case studies exist. - **Founder is named:** Kasan Francis. - **Care plan model:** every build launches on the **Essential plan** — \$25/mo from day one. Never phrase it as free or included. - `[$X]` and `[TODO: ...]` are the only permitted placeholders; each needs Kasan's input before launch. - Buttons and nav labels: Title Case. Prose and headlines: sentence case. - **Coverage:** complete — globals, Home, Contact + Thank-you, Services hub, all five service pages (incl. AI Receptionist, added 2026-07-26), Pricing, About, Process, Service Areas, both city pages, Work, 404, legal notes.

Default closing CTA band (used where a page doesn't specify its own)

Headline: Let's figure out what your site should actually be doing. **Sub:** No hard sell, no jargon, no obligation. Tell me where things stand and I'll tell you — honestly — whether I can help and what it'd take. **Button:** Start a Conversation

1. Home — /

SEO title: Web Design & Development in South Georgia | Francis Web Agency **Meta description:** Custom websites and web apps for South Georgia businesses — built by the person you actually talk to, priced from \$600, with a reply within 24 hours.

1.1 Hero

Eyebrow (mono): WEB DESIGN & DEVELOPMENT · SOUTH GEORGIA **H1:** Your website should be pulling its weight. (*citrine sweep:*) **Most don't. Sub:** You didn't start your business to babysit a website — but here you are, staring at a site that loads slowly, says too little, and hasn't earned you a customer in months. That's not a you problem. It's a nobody-actually-owned-it problem. **Primary button:** Start a Conversation **Secondary text-CTA:** See What I Build **Local line:** Web design & development for Hinesville & Valdosta, GA — and the wider South Georgia region. **Stat row (citrine top rule — all verifiable):** - From \$600 — transparent pricing, published right on this site - **Under 24 hours** — how fast you'll hear back, from the person doing the work - **1 person** — start to finish. The one who sells your site is the one who builds it **Metadata strip (mono):** HINESVILLE, GA · VALDOSTA, GA · REPLY < 24H · NO TEMPLATES

1.2 The pitch

H2: One person. The one (*citrine sweep:*) **actually building** your site. **Body:** Francis Web Agency is Kasan Francis — not a sales rep who hands you off, not an offshore team you never meet. When you email, Kasan answers. When you ask for a change, the person making it is the same person you talked to.

No telephone game, no "let me check with the developer," no mystery markup for an account manager you'll never need. **Fewer moving parts. Fewer things to go wrong.** A website that reflects that.

1.3 Services overview

H2: Built right the first time — then kept that way. **Sub:** Five things, done properly, instead of twelve done adequately.

Card — Web Design Designed and coded for your business specifically. No bloated templates, no drag-and-drop guesswork. Sites that load fast, read clearly, and turn visitors into customers. *Link:* Web Design →

Card — Web Applications When a website isn't enough and you need something that actually does the work — booking, portals, dashboards, tools your customers use. *Link:* Web Applications →

Card — SEO Getting found by the people already looking for you. No magic beans — the fundamentals, done properly, measured honestly. *Link:* SEO →

Card — Website Management Updates, security, and someone who picks up the phone. Your site stays current instead of quietly rotting. *Link:* Website Management →

Card — AI Receptionist Every missed call is a customer calling your competitor next. An AI receptionist answers every time — nights, weekends, mid-job — and captures the lead. *Link:* AI Receptionist →

1.4 The honesty band (the page's one ink band)

Eyebrow (mono): THE APPROACH **H2:** I'll tell you the truth, (*citrine sweep:*) **even when it's not what you hoped.**

Body: If a feature you're excited about is going to cost you money and confuse your customers, I'll say so — before

you pay for it, not after. If your current site is closer to fixable than you think, I'll tell you that too, even when a full rebuild would pad my invoice.

You're hiring judgment, not only hands. That works because I'm honest with you.

1.5 What I build

H2: The kind of work that has a job to do. **Sub:** Francis Web Agency is a newer studio, so you won't find a wall of logos here — you'll find standards. Every build below is the kind of site that earns its keep. - **Service-business sites** — plumbers, clinics, contractors, firms: clear offer, easy contact, found locally. - **Booking & scheduling** — let customers book while you're working, not phoning back and forth. - **Client portals & dashboards** — give customers a login instead of an email chain. - **Internal tools** — replace the spreadsheet that's quietly running your business. *(Build note: this section swaps to Featured Work — 2–3 case-study cards — the day the first project ships.)*

1.6 Process snapshot

H2: Three steps. Real dates. No mystery. - **Talk.** You tell me where things stand and what the site should be doing for the business. I tell you honestly whether I can help — and what it'd take. - **Build.** Design and code, from the person you talked to. You see progress as it happens, with a timeline that has actual dates on it. - **Measure.** Launch is the start, not the finish. We watch what matters — calls, bookings, sales — and keep tuning. **Text-CTA:** See the Full Process →

1.7 Pricing teaser

H2: Prices on the website. Novel concept. **Sub:** Most agencies make you book a call to hear a number. Here's mine up front. - **Starter** — from \$600 · 2–3 weeks · 3–5 custom pages - **Growth** *(Most Popular)* — from \$1,200 · 3–5 weeks · 7–10 pages, conversion-focused - **Premium** — from \$2,500+ · 6–8+ weeks · fully custom, no ceilings **Text-CTA:** See Full Pricing →

1.8 Service-area band (map)

H2: Based in South Georgia. Built for it. **Body:** Serving Hinesville and Valdosta, GA — plus Savannah, Jacksonville, and Tallahassee. Most projects run entirely online, so "near me" mostly means "answers fast." Which I do.

1.9 Testimonials

(Empty by design — no fabricated quotes. Section renders only when the testimonials collection has a real entry.)

1.10 FAQ

H2: Fair questions. - **How much does a website cost?** Three packages: Starter from \$600, Growth from \$1,200, Premium from \$2,500+. The price depends on how many pages you need and how custom the work gets — and whatever the number is, you'll have it before anything starts. - **How long does it take?** Starter, 2–3 weeks. Growth, 3–5. Premium, 6–8+. You get a timeline with real dates, not "soon." - **Do you work with businesses outside Hinesville and Valdosta?** Yes — across South Georgia, North Florida, and beyond. Nearly everything happens online anyway. - **Do you use templates?** No. Every site is designed and coded for the business it belongs to. Templates are why your competitor's site looks like your other competitor's site. - **What happens after launch?** Every build launches on the Essential plan — \$25/mo for hosting, security, backups, and upkeep from day one — with Plus and Pro tiers when you need more.

1.11 Closing CTA (light section, solid button)

Default closing CTA band copy (\$0).

2. Contact — /contact

SEO title: Contact | Francis Web Agency **Meta description:** Tell me about your project and get an honest answer within 24 hours — from the person who'd actually build it. No hard sell, no obligation.

2.1 Hero

H1: Start a conversation. **Sub:** No hard sell, no jargon, no obligation. Tell me where things stand and I'll tell you — honestly — whether I can help and what it'd take.

2.2 The form

Labels: Name · Email · Phone · Interested In · Project Details **Interested In options:** Starter Website · Growth Website · Premium Experience · Web Application · SEO · AI Receptionist · Website Management · Not Sure Yet **Optional fields:** Budget Range · How Did You Hear About Us? **Project details placeholder:** What's the site supposed to do for the business — and what's it doing instead? **Submit button:** Send It **Under the form:** You'll hear back from Kasan — the person who'd build it — within 24 hours.

2.3 What happens next

H2: What happens next. 1. **You hear back within 24 hours.** From Kasan, not a form robot. 2. **We talk.** A free, no-pressure call about what your site should be doing. 3. **You get a proposal.** Scope, timeline, and the full price — before anything starts.

2.4 Alternate contact

Forms not your thing? Email info@franciswebagency.com or call [229-375-4434](tel:229-375-4434).

2.5 Service area

Serving Hinesville & Valdosta, GA · Savannah · Jacksonville · Tallahassee — and anywhere with an internet connection.

3. Thank You — /thank-you (noindex)

H1: Got it. Your message is in. **Body:** You'll hear back within 24 hours — usually sooner. It'll be Kasan replying, so come ready to talk about the business, not only the website. **While you wait:** [See how the process works →](#) · [Read the pricing →](#)

4. Services hub — /services

SEO title: Web Design, Web Apps, SEO & Website Management | Francis Web Agency **Meta description:** Four services, done properly: custom web design, web applications, honest SEO, and website management — for South Georgia businesses that want a site that earns its keep.

4.1 Hero

Eyebrow (mono): SERVICES **H1:** Five things, done properly. **Sub:** Some agencies list every service they can spell. Here's what I actually do — designed, built, and maintained by one person who answers your email.

4.2 Service rows

Row — Web Design H2: Websites built to bring in business. **Body:** Custom-designed, hand-coded sites — no templates, no page builders. Clear structure, fast loads, and a page hierarchy that moves a visitor toward contacting you. From \$600, with the price and timeline agreed before anything starts. **Text-CTA:** Explore Web Design →

Row — Web Applications H2: When a website isn't enough. **Body:** Booking systems, client portals, dashboards, internal tools — software that does real work for your business, scoped to a fixed proposal so the price can't wander. **Text-CTA:** Explore Web Applications →

Row — SEO H2: Getting found, without the smoke. **Body:** Technical fixes, local search, and content structure — the fundamentals that make Google take you seriously, measured by calls and bookings rather than vanity rankings. **Text-CTA:** Explore SEO →

Row — Website Management H2: A site that stays built. **Body:** Hosting, security, backups, updates, and edits handled month to month — from \$25/mo — so your website stays current instead of quietly rotting. **Text-CTA:** Explore Website Management →

Row — AI Receptionist H2: Your phone, answered. Every time. **Body:** An AI receptionist that picks up 24/7 — takes the message, captures the caller's details, and sends you a summary. I run one on my own line; you can call it and see. **Text-CTA:** Explore AI Receptionist →

4.3 Why five and not fifteen

H2: Why only five? **Body:** Because you're hiring one person, and I'd rather be honest about what that means: a short list of services I can stand behind completely. Everything on this page is work I design, build, and maintain myself. Nothing here is resold, white-labeled, or "handled by our team."

4.4 CTA band

Default closing CTA (\$0).

5. Web Design — /services/web-design

SEO title: Custom Web Design in South Georgia — From \$600 | Francis Web Agency **Meta description:** Custom-designed, hand-coded websites for South Georgia businesses. Three transparent packages from \$600, real timelines, and no templates — built by the person you talk to.

5.1 Breadcrumb + hero

Breadcrumb: Services › Web Design **H1:** A website that earns its place on your payroll. **Sub:** Custom-designed, hand-coded, and structured to turn visitors into customers — because a pretty site that doesn't convert is an expensive business card. **Primary button:** Start a Conversation **Secondary text-CTA:** See Pricing →

5.2 Approach

H2: Designed and built by the same person, on purpose. **Body:** Most agencies split design and development across teams, and it shows — designs that can't be built well, builds that lose the design's intent. Here, the person designing your pages is the person coding them, so what you approve is what ships.

Every site starts from your business goals, not a theme. Structure first, speed always, and no feature that doesn't have a job.

5.3 What's included

H2: What every build includes. - Custom design — no templates, no page builders - Hand-coded, responsive front end that works on the phones your customers actually use - Contact forms wired to your email - On-page SEO foundations — clean structure, fast loads, proper metadata - Secure deployment and launch - A walkthrough of how to use what you got

5.4 Who this is for

H2: This is for you if... - Your current site is embarrassing you and you know it - You're starting a business and want it taken seriously from day one - You're getting traffic that never turns into calls - You've been burned by a templated build that looked like everyone else's

Not for you if: you want the cheapest possible page on the internet tonight. A \$50 builder site exists; it's the thing this service replaces.

5.5 Outcomes

H2: What you actually get out of it. A site that loads fast, reads clearly, and gives every visitor one obvious next step. Customers find you, understand you, and contact you — instead of bouncing to the competitor with the better website. That's the whole point, and it's the standard every build is held to.

5.6 Process (service-specific)

H2: How a build runs. 1. **Discovery & Strategy** — goals, audience, competition; a page-by-page plan with real dates. 2. **Design** — wireframes to full mockups. You approve what ships before it's built. 3. **Development & Testing** — hand-coded, checked across browsers and devices, tuned for speed. 4. **Launch & Support** — deployed, verified, and living on the Essential plan from day one.

5.7 Pricing

H2: Three packages. Real numbers.

	STARTER	GROWTH (<i>MOST POPULAR</i>)	PREMIUM
Starting at	\$600	\$1,200	\$2,500+
Timeline	2–3 weeks	3–5 weeks	6–8+ weeks
Pages	3–5 custom pages	7–10 pages	Fully custom
Core	Responsive custom UI, contact form, on-page SEO foundations, secure launch	Everything in Starter + conversion-focused structure, SEO-optimized content structure, analytics, scalable architecture	Everything in Growth + custom design system, advanced interactions, CMS integration, deep SEO & performance work, priority support

Terms: 50% deposit to start, 50% on completion. Larger builds can ask about milestone billing. No hidden fees — anything outside scope is quoted before it happens, never after.

5.8 Why FWA

H2: Why hire one person over an agency? Because at the agency you're also getting one person — the one assigned to your account — plus layers you're paying for. Here you get the builder directly: faster answers, nothing lost in translation, and accountability that has a first name. When you email, Kasan answers.

5.9 Related services

A site this good deserves to stay that way — see [Website Management](#). Need it found, too? [SEO](#). Need it to *do* something? [Web Applications](#). And the calls the new site generates? The [AI Receptionist](#) answers them.

5.10 FAQ

- **Why "starting at"?** Because every site is custom. The base price covers the package as described; extra pages or features get quoted up front, and you approve the total before work starts.
- **Can I update the site myself?** Depends on the build — CMS-backed sites, yes, with a walkthrough included. Either way, the Essential plan covers small edits monthly so you're never stuck.
- **What if I need more pages later?** Sites are structured to grow. New pages get a plain, fixed quote — no rebuild required.

5.11 CTA band

Headline: Ready for a site that pulls its weight? **Sub:** Tell me what your business needs the site to do. You'll have an honest answer — and a real number — within 24 hours. **Button:** Start a Conversation

6. Web Applications — /services/web-applications

SEO title: Custom Web Application Development | Francis Web Agency **Meta description:** Booking systems, client portals, dashboards, and internal tools — custom web applications scoped to a fixed proposal, built by the developer you actually talk to.

6.1 Breadcrumb + hero

Breadcrumb: Services › Web Applications **H1:** Software that does the work you're doing by hand. **Sub:** Booking, portals, dashboards, internal tools — built for how your business actually runs, not how a plugin thinks it should. **Primary button:** Book a Discovery Call **Secondary text-CTA:** See What I Build →

6.2 Approach

H2: Built around the workflow, not the other way around. **Body:** Off-the-shelf tools make your business bend to fit them. A custom application starts from what you already do — the booking flow, the client back-and-forth, the spreadsheet that's become load-bearing — and turns it into software that handles it.

You don't need to know what's technically possible. Describe the problem; proposing the right shape of solution is the job.

6.3 What I build

H2: The kind of thing this looks like. - **Booking & scheduling** — customers book while you work; no more phone tag - **Client portals** — a login for your customers instead of an email chain - **Dashboards** — your business numbers in one place, current, without the copy-paste - **Internal tools** — replace the fragile spreadsheet everyone's afraid to touch - **Business-management apps** — quotes, jobs, invoices, and records that talk to each other

6.4 Who this is for

H2: This is for you if... - A repetitive task is eating hours every week - Customers wait on you for things they could do themselves - Your "system" is spreadsheets, texts, and memory - An off-the-shelf tool almost fits, and *almost* is costing you

6.5 Outcomes

H2: What changes. Hours come back. Mistakes stop repeating. Customers get answers without waiting on you. The business runs on a system instead of on your memory — which is what makes it possible to grow without cloning yourself.

6.6 Process (service-specific)

H2: How a custom build runs. 1. **Discovery** — I learn the workflow: what happens, who does it, where it breaks. 2. **Fixed proposal** — scope, timeline, and one price. Custom doesn't mean open-ended. 3. **Build & review** — working software early and often; you steer while it's cheap to steer. 4. **Launch & support** — deployed, documented, and maintained under a management plan.

6.7 Pricing

H2: Scoped per project. Priced before it starts. **Body:** Custom applications vary too much for a package price — a booking form and a full client portal aren't the same job. What's fixed is the shape of the deal: a free discovery call, then a written proposal with the complete price. No hourly meter, no drift. *(Optional anchor, pending real number — or delete this line:)* Custom applications typically start around **[\$X]**.

6.8 Why FWA

H2: One developer, whole picture. Custom software fails most often between people — the salesperson who promised, the manager who translated, the developer who guessed. Here those are the same person. What you explain on the call is what gets built, by the person you explained it to.

6.9 Related services

Applications live inside sites — see [Web Design](#). Keeping it fast, secure, and current is [Website Management](#).

6.10 FAQ

- **Do I need to write a spec?** No. Describe the problem in plain words; the proposal turns it into a plan you can read and approve.
- **What does a custom app cost?** It's scoped per project — but the price is fixed in the proposal before work starts, and the discovery call that produces it is free.
- **Can you build on what I already have?** Usually, yes. If your current site or tools are worth keeping, the app is built to fit them — you'll get a straight answer about that in discovery.

6.11 CTA band

Headline: Describe the problem. I'll propose the solution. **Sub:** A free discovery call, then a fixed proposal — scope, timeline, and one price. **Button:** Book a Discovery Call

7. SEO — /services/seo

SEO title: SEO Services in South Georgia — Honest, Measured | Francis Web Agency **Meta description:** Technical SEO, local search, and content structure for South Georgia businesses — measured by calls and bookings, not vanity rankings. Fixed-price audit to start.

7.1 Breadcrumb + hero

Breadcrumb: Services > SEO **H1:** SEO that isn't smoke. **Sub:** No guaranteed rankings, no secret tricks, no monthly report you can't read. The fundamentals of getting found — done properly and measured by the business they bring in. **Primary button:** Start With an Audit **Secondary text-CTA:** How It Works →

7.2 Approach

H2: The honest version of SEO. **Body:** Most SEO pitches sell mystery — algorithms, hacks, a guaranteed spot on page one. Here's the truth: nobody controls Google. What actually works is unglamorous — a technically clean site, content that answers what your customers search for, and consistent local signals. That's what I do, and I'll show you exactly what changed and why.

If your money would be better spent elsewhere — a faster site, better copy, a Google Business Profile cleanup — I'll say that instead of selling you a retainer.

7.3 What's included

H2: The work, concretely. - **Technical SEO** — speed, structure, indexing, schema markup: making Google's job easy - **Local SEO** — Google Business Profile, consistent business listings, city pages that rank - **On-page & content structure** — pages that answer real searches, with a hierarchy Google and humans both follow - **Measurement** — a plain-language report tied to calls and bookings, not rankings screenshots

7.4 Who this is for

H2: This is for you if... - Customers say "I didn't know you existed" — and you've been here for years - Your competitors show up first for searches you should own - You're getting traffic that doesn't turn into contact - You've paid for SEO before and never understood what you bought

7.5 Outcomes

H2: What "working" means here. Being found by people already looking for what you sell — in your cities, for your services — and having the numbers to see it: search visibility, site visits, and the calls and form submissions they produce. If those don't move, we change the plan. That's the measurement, not a rankings chart.

7.6 Process (service-specific)

H2: How it runs. 1. **Audit** — a fixed-price, plain-language review of where your site stands and what's holding it back. Yours to keep, whoever you hire. 2. **Fix the foundations** — the technical and structural work the audit surfaced. 3. **Build the signals** — local profiles, content, and structure, month by month. 4. **Measure & adjust** — monthly plain-language reporting; the plan follows the results.

7.7 Pricing

H2: An audit to start. A number you can read. - **SEO Audit** — **[\$X]**, fixed. The complete picture of where you stand and what to do — useful whether or not we work together after. - **Monthly SEO** — from **[\$X]–[\$X]/mo** depending on scope, cancel anytime. Anything outside the plan is quoted before it happens. **Body:** No long contracts, no "trust the process" invoices. Every month states what was done and what it produced.

7.8 Why FWA

H2: Your SEO, done by the person who builds the sites. SEO agencies hand your account to whoever's available. Here, the person tuning your search presence is a developer — the technical half of SEO isn't outsourced or approximated, and site fixes get made, not listed in a PDF for someone else to do.

7.9 Related services

SEO works best on a site worth ranking — see [Web Design](#). Ongoing SEO upkeep is also part of [Website Management](#) Pro.

7.10 FAQ

- **Can you guarantee first place on Google?** No — and nobody honest can. What I guarantee is real work, explained plainly, measured by results you can verify.
- **How long until SEO shows results?** Local improvements often show within weeks; competitive terms take months. The audit gives you an honest read on your situation before you spend.
- **Do I need monthly SEO forever?** No. Some businesses need a one-time fix-up; some benefit from ongoing work. The audit tells you which one you are — including if it's the cheaper one.

7.11 CTA band

Headline: Find out where you actually stand. **Sub:** One fixed-price audit. Plain language, real findings, yours to keep. **Button:** Start With an Audit

8. Website Management — /services/website-management

SEO title: Website Management & Maintenance Plans — From \$25/mo | Francis Web Agency **Meta description:** Hosting, security, backups, updates, and content edits from \$25/mo — website management by the person who builds them. Three plans, cancel anytime.

8.1 Breadcrumb + hero

Breadcrumb: Services > Website Management **H1:** Websites aren't "done." Someone has to own that. **Sub:** Hosting, security, backups, updates, and edits — handled month to month by the person who builds sites for a living, so yours stays fast, safe, and current. **Primary button:** Start a Plan **Secondary text-CTA:** Compare Plans →

8.2 Approach

H2: The quiet work that keeps a site alive. **Body:** Every website ages — software needs patching, security needs watching, content drifts out of date. Most owners find this out the bad way: the site's down, hacked, or advertising a sale that ended last spring. Management is the unglamorous fix: someone competent owns the site's health, every month, so you never think about it.

Every site I build launches on the Essential plan from day one — because handing over a site with no one watching it isn't a handover, it's an abandonment.

8.3 The plans

H2: Three plans. Pick by how much your site matters.

	ESSENTIAL	PLUS (MOST POPULAR)	PRO
Price	\$25/mo	\$50/mo	\$100/mo
Built for	Brochure sites that need to stay safe and online	Growing businesses iterating regularly	Sites that are core to the business
Includes	Managed hosting · SSL monitoring · security updates · regular backups · uptime monitoring · 15 min of content edits · email support	Everything in Essential + 30 min of edits · performance optimization · monthly health report · priority support	Everything in Plus + 60 min of edits · priority turnaround · technical SEO upkeep · analytics review · quarterly strategy session

Terms: Billed monthly in advance. Edit minutes don't roll over. Anything beyond your plan is quoted up front before work starts. Cancel anytime.

8.4 Who this is for

H2: This is for you if... - Nobody currently owns your website's health — and you know it - Your site was built by someone who's since vanished - You keep meaning to update that one page - Downtime or a hack would cost you real money

8.5 Outcomes

H2: What you stop worrying about. Downtime. Hacks. Expired certificates. "Is the backup recent?" The stale homepage. The update you've been putting off. It's all owned — and if something does break, you know exactly who answers, and how fast.

8.6 Covered vs. quoted

H2: What's covered, what's quoted. **Covered by your plan:** everything in the table — the monthly upkeep, monitoring, and your edit minutes. **Quoted before it happens:** new pages, redesigns, new features, and anything else beyond plan scope. You approve the number first, every time. No surprise line items — that's the whole deal.

8.7 Why FWA

H2: Maintained by a builder, not a help desk. Most maintenance plans are a ticket queue at a reseller. This one is the developer who builds these sites keeping yours healthy — which means problems get diagnosed and fixed, not escalated and forgotten.

8.8 Related services

Need more than upkeep — a redesign or new build? [Web Design](#). Want the site found while it's healthy? [SEO](#). Phone as neglected as the site was? The [AI Receptionist](#) fixes that too.

8.9 FAQ

- **Is management required with a new build?** Every build launches on the Essential plan — \$25/mo from day one — because a site with no one watching it doesn't stay a good site. You can change tiers or cancel anytime after launch.
- **My site was built by someone else. Can you take it over?** Usually, yes. I'll review it first and tell you honestly what shape it's in — and if it's not worth maintaining, I'll say that too.
- **What if I need something bigger than my edit minutes?** It gets quoted up front, you approve it, then it happens. Nothing beyond your plan is ever billed without a yes.

8.10 CTA band

Headline: Give your website an owner. **Sub:** From \$25/mo, handled by the person who builds them. Start with a plan — or ask for an honest read on the site you have. **Button:** Start a Plan

9. Pricing — /pricing

SEO title: Web Design Pricing — Transparent, From \$600 | Francis Web Agency **Meta description:** Real web design prices, published: packages from \$600, management from \$25/mo, and fixed proposals for custom work. 50/50 payment terms, no hidden fees.

9.1 Hero

Eyebrow (mono): PRICING **H1:** The prices are on the page. As they should be. **Sub:** No "book a call to find out." Packages below, terms in plain language, and anything custom gets a fixed proposal before work starts.

9.2 Website packages

H2: Website packages. *(Full tier cards — same data as §5.7: Starter \$600 / Growth \$1,200 (Most Popular) / Premium \$2,500+, timelines and inclusions identical. One source of truth; don't fork the numbers.)*

9.3 Payment terms

H2: How payment works. **Step 1 — 50% to start.** Locks your spot and starts the work. **Step 2 — 50% at completion.** Due when the site is done and you've approved it — before launch. Larger builds can ask about milestone billing. No hidden fees; anything beyond scope is quoted and approved before it happens.

9.4 Custom apps, SEO & management

H2: The rest of the menu. - **Web Applications** — scoped per project, fixed proposal, free discovery call. [How scoping works →](#) - **SEO** — fixed-price audit to start, monthly plans from **[\$X]**/mo. [The honest version →](#) - **Website Management** — Essential \$25 · Plus \$50 · Pro \$100 per month; every new build launches on Essential. [Compare plans →](#) - **AI Receptionist** — one-time setup **[\$X]**, then monthly service from **[\$X]**/mo. Call the demo before you decide. [Hear it answer →](#)

9.5 What's not included

H2: What's not in the package price. Domain registration and hosting fees · copywriting and content creation · professional photography · logo and brand design. If your project needs any of these, it's flagged during scoping — never discovered on an invoice.

9.6 Pricing FAQ

- **Why "starting at"?** Every site is custom, so the base price covers the package as described. Extra pages or features are quoted up front — you always approve the total before work begins.
- **Do you offer payment plans?** The standard split is 50/50. Larger builds can ask about milestone billing — a schedule tied to progress you can see.
- **What if I need more pages later?** Sites are structured to grow. New pages get a plain, fixed quote — no rebuild required.

9.7 Closing

(Contact form card, per current pattern, with:) **H2:** Get your real number. **Sub:** Tell me what you need and you'll have an honest quote — the whole number — within 24 hours.

10. AI Receptionist — /services/ai-receptionist

SEO title: AI Receptionist for Small Business — Answers 24/7 | Francis Web Agency **Meta description:** An AI receptionist that answers every call, takes messages, and captures lead details 24/7 — configured by the developer who runs one on his own line. Call the demo.

10.1 Breadcrumb + hero

Breadcrumb: Services › AI Receptionist **H1:** Missed calls don't leave voicemails. They call your competitor. **Sub:** An AI receptionist answers every call — nights, weekends, mid-job — takes the message, captures the caller's details, and sends you a summary. You get the lead instead of losing it. **Primary button:** Call the Demo **Secondary text-CTA:** How It Works →

10.2 The demo band (directly after the hero — the page's signature move)

H2: Don't take my word for it. (*citrine sweep*;) **Call it right now. Number (large, mono):** [TODO: demo number — dedicated Vapi demo assistant] **Body:** That number is answered by the exact product this page sells. Ask it what FWA does, what an AI receptionist costs, or anything else — then imagine it answering for your business. (*Build note: until the demo number exists, this band renders the standard Start a Conversation CTA instead.*)

10.3 Approach

H2: I sell this because I use it. **Body:** Francis Web Agency's own phone line is answered by an AI receptionist — the same system offered here, wired into how I track calls and leads. It answers when I'm building, driving, or asleep, and every call ends up as a record I can act on instead of a missed-call notification I forgot about.

One more thing, because honesty is the whole brand: it introduces itself as an assistant. It doesn't pretend to be a person, and I won't configure it to.

10.4 What it does

H2: What it actually does. - **Answers every call, instantly** — no rings into voicemail, no hold music, 24/7 - **Talks like a person helps** — a natural conversation, not a press-1 menu - **Knows your business** — hours, services, service area, and the questions you get every day, configured from how you actually work - **Captures the lead** — name, number, and what they need, every time - **Sends you the summary** — a record of every call, so nothing lives in your memory - **Knows its limits** — when a call needs you, it takes a detailed message and flags it instead of improvising

10.5 Who this is for

H2: This is for you if... - Your phone rings while you're on a ladder, with a patient, or under a sink - You've called back a missed number and heard "oh, we found somebody else" - After-hours callers get voicemail — and voicemail gets nothing - You're a one-person operation and the phone is the interruption you can't afford — or ignore

10.6 Outcomes

H2: What changes. Every call gets answered, so every lead gets captured. You work without watching the phone, and you end the day with a record of who called, what they wanted, and who needs a callback — instead of a missed-call list and a guilty feeling.

10.7 Process (service-specific)

H2: How it gets set up. 1. **Configure** — I learn your business: services, hours, pricing, the questions callers actually ask. The receptionist gets built around your answers. 2. **Connect** — a new number, or your existing number forwarded. Your customers dial what they always dialed. 3. **Test together** — we call it, poke at it, and tune it until it handles your real calls the way you would. 4. **Live + tuned** — it starts answering; adjustments are part of the monthly service, not an extra invoice.

10.8 Pricing

H2: One setup fee. One monthly number. - **Setup** — **[\$X], one time**. Configuration, number connection, testing, and go-live. - **Monthly service** — from **[\$X]/mo**, based on call volume. Includes the phone number, answering, call summaries, and ongoing adjustments. Cancel anytime. **Body:** No long contract, no per-minute mystery math. If your call volume changes, the plan changes with it — and you'll hear that from me before it's on an invoice.

10.9 Why FWA

H2: Configured by the person who builds these systems. This isn't a reseller dashboard with your logo on it. The developer configuring your receptionist runs one in production on his own business line — and if you want it connected to more (booking, your website, a lead list), that's literally the rest of this website.

10.10 Related services

Calls come from somewhere — usually a website. Web Design makes it one worth calling from. SEO gets the phone ringing in the first place.

10.11 FAQ

- **Does it sound like a robot?** Call the demo and judge for yourself — that's what it's for. It's a natural voice having a real conversation, and it tells callers it's an assistant.
- **Can I keep my number?** Yes. Your existing number forwards to the receptionist — customers dial what they've always dialed. A new dedicated number works too.
- **What happens when it can't help?** It takes a detailed message, flags the call for you, and says so honestly. It never improvises an answer it doesn't have.
- **What do I get after each call?** A summary — who called, their number, what they needed — delivered to you, every call.
- **Can I change what it says?** Yes. Adjustments are included in the monthly service. As your business changes, the receptionist changes with it.
- **Is there a contract?** Month to month. Cancel anytime, keep your number.

10.12 CTA band

Headline: Stop losing the calls you never heard ring. **Sub:** Call the demo, then let's set one up for your line — configured, tested, and answering within days. **Button:** Call the Demo (*secondary text-CTA: Start a Conversation*)

11. About — /about

SEO title: About Kasan Francis | Francis Web Agency **Meta description:** Francis Web Agency is Kasan Francis — a one-person web studio in South Georgia building custom sites, web apps, and AI receptionists for businesses that want results.

11.1 Hero

H1: One person. On purpose. **Sub:** Francis Web Agency is Kasan Francis — and that's not a limitation to apologize for. It's the reason the work is good.

11.2 Story

H2: Why FWA exists. **Body:** Most small businesses get websites from one of two places: a template mill that ships the same site to everyone, or an agency where the price includes three people you'll never meet. Either way, the person you talk to isn't the person doing the work — and the site shows it.

Francis Web Agency is the third option: a South Georgia studio where design, code, and strategy come from one builder who treats your website like what it is — a business asset that should pay for itself.

11.3 Who's behind it

H2: Meet Kasan. **Body:** Kasan Francis designs and builds every project FWA takes on — custom websites, web applications, and the AI receptionist that answers FWA's own phone. Based in South Georgia, working with businesses in Hinesville, Valdosta, and wherever the internet reaches. [TODO: Kasan — 1–2 real bio facts: background, years building, what you did before FWA] [TODO: founder photo] **Pull quote (Kasan, first person):** "I'd rather build fewer sites that actually work than a pile of them that look fine and do nothing. You hire me, you get me — the whole way through."

11.4 Principles

H2: What the work is held to. - **Outcomes** — a website is judged by the business it brings in, not the awards it could enter. - **Performance** — speed is customers. Every build is tuned like it matters, because it does. - **Direct access** — you talk to the builder. Questions get answers, not ticket numbers. - **Honesty** — the truth about what you need, even when it's a smaller invoice.

11.5 How we work

H2: What working together looks like. **Body:** A defined process with real dates, progress you can see, and no mystery between kickoff and launch. The full walkthrough is on the process page. **Text-CTA:** See the Process →

11.6 CTA band

Default closing CTA (\$0).

12. Process — /process

SEO title: How It Works — The FWA Process | Francis Web Agency **Meta description:** Five steps from first call to launched site — with real dates, daily communication, and transparent pricing at every stage. No mystery, no vanishing act.

12.1 Hero

Eyebrow (mono): THE PROCESS **H1:** Five steps. Real dates. No vanishing act. **Sub:** Here's exactly what happens between "let's talk" and "we're live" — because not knowing is why hiring a web person feels risky.

12.2 The five steps

1. **Discovery & Strategy** — I dig into your goals, your audience, and your competition, and turn it into a plan: site architecture, technical requirements, and a timeline with dates. *Includes: competitor analysis · audience definition · site architecture · technical requirements*
2. **Design** — wireframes first, then full mockups. You see and approve exactly what's getting built before a line of it is coded. *Includes: wireframing · UI/UX design · interactive prototypes · design system*
3. **Development** — clean, fast, hand-written code on modern frameworks, built to be quick today and maintainable in three years. *Includes: front-end build · CMS integration · responsive optimization · interactions*
4. **Testing & Launch** — checked across browsers and devices, tuned for speed, verified for SEO foundations, then deployed. *Includes: cross-browser testing · speed optimization · SEO foundation check · domain & hosting setup*
5. **Ongoing Support** — every build launches on the Essential plan (\$25/mo) so someone owns the site's health from day one. You also get a walkthrough of managing your own content. *Includes: CMS training · security updates · monthly upkeep · iterations*

12.3 Stat row (verifiable process commitments)

- **2 weeks** — a typical strategy phase, start to plan
- **Daily** — how often you hear from me during a build
- **100%** — of the price, known before work starts

12.4 What I need from you

H2: Your part of the job. **Body:** Good projects stall on missing content, slow feedback, and surprise stakeholders — so let's not. What keeps your build on schedule: your content (or a plan for it) before design ends, feedback within a couple of days at each checkpoint, and every decision-maker in the room from day one. I'll tell you exactly what's needed and when; the timeline assumes we both show up.

12.5 CTA band

Headline: Step one is a conversation. **Sub:** Tell me what you're trying to build. You'll know the process, the timeline, and the price before you commit to anything. **Button:** Start a Conversation

13. Service Areas — /service-areas

SEO title: Service Areas — South Georgia & North Florida | Francis Web Agency **Meta description:** Web design and development for Hinesville, Valdosta, Savannah, Jacksonville, and Tallahassee — from a South Georgia studio that works wherever you are.

13.1 Hero

H1: Built in South Georgia. Working wherever you are. **Sub:** Most of this work happens online — but knowing the local market isn't nothing, and this is home.

13.2 Primary markets (two city cards)

Hinesville, GA — Web design for Liberty County businesses, from Fort Stewart to Flemington. [Web Design in Hinesville →](#) **Valdosta, GA** — Web design for the commercial hub of South Georgia, VSU to the I-75 corridor. [Web Design in Valdosta →](#)

13.3 The wider area

H2: Also serving. Savannah, GA · Jacksonville, FL · Tallahassee, FL — and beyond. Projects run over calls, email, and shared previews, so distance has never cost a client anything but a handshake.

13.4 CTA band

Default closing CTA (\$0).

14. Web Design in Hinesville, GA — /web-design-hinesville-ga

SEO title: Web Design in Hinesville, GA | Francis Web Agency **Meta description:** Custom web design for Hinesville and Liberty County businesses — fast, mobile-first sites from \$600, built by a South Georgia developer who answers within 24 hours.

14.1 Hero

H1: Web design in Hinesville, GA. **Sub:** Custom websites for Liberty County businesses that live on referrals and can't afford to lose the customer who looked them up first.

14.2 Local intro

H2: Hinesville runs on word of mouth. Your website is where it goes to check. **Body:** Hinesville is a small-business town with a moving population — Fort Stewart brings people in and rotates them out, which means a steady stream of customers who don't know anybody yet and pick from their phone. When someone gets your name from a neighbor, the next thing they do is look you up. A slow, dated, or missing site ends that referral on the spot; a fast, clear one turns it into a call.

14.3 Services in Hinesville

H2: What Hinesville businesses hire me for. Custom web design from \$600 · web applications for booking and scheduling · SEO that wins "near me" searches · website management from \$25/mo · an AI receptionist for the calls you miss on the job.

14.4 Why a local partner

H2: Local enough to get it. **Body:** A developer who knows what Fort Stewart rotation does to your customer base, why your busiest search traffic is on a phone in a parking lot, and that Liberty County word-of-mouth is worth protecting. Same-day answers, South Georgia hours.

14.5 Local proof

(Holding state until real Hinesville work exists:) Hinesville case studies will live here as projects ship. Until then, the process, pricing, and the person are all on this site — and a conversation costs nothing.

14.6 Map

(Map centered on Hinesville.) Serving Hinesville, Fort Stewart, Flemington, Midway, and Liberty County.

14.7 Local FAQ

- **Do you work with Fort Stewart-area businesses?** Yes — on-post-adjacent businesses, military-family services, and everyone who serves that community.
- **Do we need to meet in person?** No — most projects run entirely online. But it's Hinesville, not Houston; coffee is on the table.
- **Is local search really worth it here?** Yes. New arrivals search before they ask around — showing up in "near me" results is how a rotating population finds you first.

14.8 Pricing teaser

Starter from \$600 · Growth from \$1,200 · Premium from \$2,500+ — [full pricing →](#)

14.9 CTA band + form

Headline: Hinesville checks you out online. Be worth finding. **Sub:** Tell me about your business — you'll hear back within 24 hours. *(Contact form card.)*

15. Web Design in Valdosta, GA — /web-design-valdosta-ga

SEO title: Web Design in Valdosta, GA | Francis Web Agency **Meta description:** Custom web design for Valdosta and Lowndes County — sites built to compete in South Georgia's commercial hub, from \$600, by a developer who answers within 24 hours.

15.1 Hero

H1: Web design in Valdosta, GA. **Sub:** Custom websites for businesses competing in the commercial hub of South Georgia — where "good enough" gets outranked by lunch.

15.2 Local intro

H2: Valdosta punches above its size. Your website has to. **Body:** Between VSU's student traffic, the regional pull of Lowndes County shopping and healthcare, and the I-75 corridor moving strangers through daily, Valdosta businesses compete for customers who have options. The search results here are crowded with established names — which is exactly why a fast, sharply positioned website moves the needle: most of those established names are coasting on sites they haven't touched in years.

15.3 Services in Valdosta

H2: What Valdosta businesses hire me for. Custom web design from \$600 · web applications for portals and scheduling · SEO to compete in a crowded market · website management from \$25/mo · an AI receptionist so the phone never loses you a customer.

15.4 Why a local partner

H2: Local enough to get it. **Body:** A developer who knows the difference between marketing to VSU students, regional shoppers, and Lowndes County locals — and builds sites that speak to the audience you actually want. South Georgia based, same-day answers.

15.5 Local proof

(Holding state until real Valdosta work exists:) Valdosta case studies will live here as projects ship. Until then — the process, the pricing, and the person are all one click deep, and the first conversation is free.

15.6 Map

(Map centered on Valdosta.) Serving Valdosta, Lake Park, Hahira, the VSU area, and Lowndes County.

15.7 Local FAQ

- **Do you work with businesses across Lowndes County?** Yes — Valdosta, Lake Park, Hahira, and the county over.
- **Can a small business really compete online here?** Yes — because most established Valdosta sites are older than they look. Speed, clarity, and current SEO beat seniority more often than you'd think.
- **Do you build for student-facing businesses?** Yes — VSU's calendar shapes half this town's traffic, and a site can be built to catch it.

15.8 Pricing teaser

Starter from \$600 · Growth from \$1,200 · Premium from \$2,500+ — [full pricing →](#)

15.9 CTA band + form

Headline: Valdosta has options. Give them a reason to pick you. **Sub:** Tell me about your business — you'll hear back within 24 hours. (*Contact form card.*)

16. Work — /work (unlinked until populated)

SEO title: Work | Francis Web Agency **Meta description:** Selected work from Francis Web Agency — case studies with real numbers, published as projects ship.

16.1 Holding state (launch)

H1: The work will speak here. With numbers. **Body:** Francis Web Agency is a newer studio, and this page holds a standard instead of a backlog: every project that lands here will come with the real story — what the business needed, what got built, and what measurably changed. No stock screenshots, no borrowed logos.

Taking on a focused number of new projects now — which is how the first case study gets written. **Button:** Start a Conversation

16.2 Case-study copy pattern (for /work/{slug} , when projects land)

- **Hero:** client + one-line result.
- **Metadata strip (mono, all true):** CS-NNN · CLIENT · LAUNCHED MM/YYYY · [real metrics]
- **Sections:** The problem → The approach → What got built → What changed (numbers) → Stack → Client's words (if given) → CTA.
- **Voice:** same rules as everywhere — specifics over adjectives, zero invented figures.

17.404

H1: This page isn't pulling its weight. **Body:** Mostly because it doesn't exist. The rest of the site does, though — and it's in better shape. **Links:** [Home](#) · [Services](#) · [Pricing](#) · [Start a Conversation](#)

18. Legal pages — notes (not rewritten)

`/privacy-policy` and `/terms` keep their existing legal text (effective June 29, 2026) — legal content is not brand copy and doesn't get the voice treatment. Two checks during rebuild: add the AI Receptionist service to any services list in the Terms, and confirm call-recording/AI-call disclosure language is added to the Privacy Policy when the receptionist launches. **[TODO: legal review for AI call handling disclosure]**

Appendix A — seed updates implied by this copy (apply during rebuild)

SEED	FIELD	NEW VALUE
site_settings	announcement_text	"Taking on a focused number of new projects." (evergreen — no month)
site_settings	announcement_cta_label	"Start Yours →"
site_settings	nav_cta_label	"Start a Conversation"
site_settings	footer_blurb	"Custom websites and web apps built to bring in business — by the person you actually talk to."
services	rows	3 → 5 (add SEO + AI Receptionist); slugs → web-design, web-applications, seo, website-management, ai-receptionist; card copy per \$1.3
faqs	answers	rewrite per \$1.10 / \$9.6 (facts unchanged); add per-service categories with \$5.10 / \$6.10 / \$7.10 / \$8.9 / \$10.11, city categories per \$14.7 / \$15.7
packages / support_plans	copy fields	align descriptions to \$5.7 / \$8.3 (numbers unchanged)

Appendix B — open items (need Kasan before launch)

- **[\$X]** — SEO audit price (\$7.7, \$9.4)
- **[\$X]–[\$X]/mo** — SEO monthly range (\$7.7)
- **[\$X]** — optional web-app starting anchor (\$6.7) — or delete the line
- **[\$X]** setup + **[\$X]/mo** — AI Receptionist pricing (\$10.8, \$9.4)
- **[TODO: demo number]** — dedicated Vapi demo assistant + number for \$10.2 (**launch dependency** for the AI Receptionist page's demo band; page can ship with the fallback CTA)
- **[TODO: Kasan – 1–2 real bio facts]** + founder photo (\$11.3)
- **[TODO: legal review for AI call handling disclosure]** (\$18)
